```

The flowchart illustrates a dataset audit process. It begins with an initial state 'audit_dataset_structure' for 'dataset: HCT116', which is enclosed in a dashed orange border. An arrow points down to a blue-bordered rounded rectangle labeled 'validate_dataset_audit'. From here, the process branches: one arrow leads to an orange-bordered rounded rectangle 'build_chunk_manifests', and another leads directly to a red-bordered rounded rectangle 'all'. The 'build_chunk_manifests' step leads to a green-bordered rounded rectangle 'merge_dataset_results'. From 'merge_dataset_results', an arrow leads to another green-bordered rounded rectangle 'postprocess_dataset', and another arrow leads to the 'all' node. Finally, an arrow from 'postprocess_dataset' also leads to the 'all' node. The 'all' node is a red-bordered rounded rectangle at the bottom of the flow.
